The undersigned childhood cancer organizations are members of the Alliance for Childhood Cancer, consisting of patient advocacy groups, healthcare professionals, and scientific organizations representing Americans who care deeply about childhood cancer. We are writing to urge you to take action on H.R. 3089/S. 1544, the Accelerating Kids’ Access to Care Act before the conclusion of the 117th Congress.

Approximately 1 in 264 children in the U.S. are diagnosed with cancer before their 20th birthday. Unfortunately, cancer remains the most common cause of death by disease among children in the United States. Unfortunately, 1 in 5 children diagnosed with cancer in the U.S. will not survive, and for the ones who do, the battle is never over. By the age of 50, more than 99% of survivors have had a chronic health problem, and 96% have experienced a severe or life-threatening condition caused by the toxicity of the treatment that initially saved their life, including brain damage, loss of hearing and sight, heart disease, secondary cancers, learning disabilities, infertility and more. By the time a child in treatment for cancer today reaches the age of 50, we want these statistics to be far less grim.

Children with cancer face unique health care concerns, and often require specialized care from a specific provider which may include a practitioner with unique subspecialty expertise or a facility that maintains care teams and resources with the expertise to address the unique needs of the child’s medical condition. Unfortunately, these providers or facilities are not available in every state. As a result, many children do not have access to specialized care in their home state.

For children with complex medical needs such as cancer, patients are routinely required to travel out of state to receive care from a specific specialist or care team, or to participate in a clinical trial. More than half of children in the United States rely on Medicaid and the Children’s Health Insurance Program (CHIP) as their central sources of health care coverage, but Medicaid and CHIP coverage is limited to providers in a child’s home state. Under current requirements, if a child’s medical condition requires them to obtain care from an out-of-state provider or an out-of-state care team, the provider must go through the screening and
enrollment process in the child's home state Medicaid program. This paperwork process significantly varies by state and causes burdensome, unnecessary delays in providing time-sensitive care, which unfortunately can cause a child's condition to worsen.

The Accelerating Kids’ Access to Care Act would address these delays by creating an alternative opt-in pathway for providers in good standing to enroll in multiple state Medicaid programs, allowing them to provide essential, time-sensitive care to children who need it. The legislation pertains only to provider screening and enrollment and does not change the authority states have to authorize out-of-state care or negotiate payment with providers who accept such cases.

The Accelerating Kids’ Access to Care Act enjoys bipartisan support from 23 cosponsors in the Senate and 98 cosponsors in the House of Representatives. The legislation has received technical assistance (TA) from the Centers for Medicare & Medicaid Services (CMS) and the Department of Health and Human Services, and a modified version of the legislation to reflect this feedback was included in the Senate Finance Committee’s youth mental health draft legislation. We urge you to take immediate action on this bill so children who require critical, time-sensitive care have access to providers who can best meet their needs without burdensome paperwork delays.

Thank you for your leadership on behalf of children with cancer. We look forward to working with you as the Accelerating Kids’ Access to Care Act moves through the legislative process. Should you have any questions or need additional information, please contact Sarah Milberg, Co-Chair of the Alliance for Childhood Cancer, at smilberg@allianceforchildhoodcancer.org, or Dr. Michael Link, Co-Chair of the Alliance for Childhood Cancer, at mlink@stanford.edu.

Sincerely,
